XAMP installiert

Zuerst einen lokale Test im XAMPP Server durchführen.

Php.ini überarbeitet

C:\xampp\php\php.ini

Bearbeiten Sie Ihre php.ini-Datei und ändern die folgenden Zeilen:

- 1. error reporting=E ERROR
- 2. display errors=0

WARNUNG!!!

Sie nutzen einen Server mit PHP5.3, Fehlerausgabe im Browser und strenge Standardwarnungen aktiviert. Diese Kombination **erlaubt nicht den korrekten Betrieb von Joomla! und seinen Erweiterungen**. Wahrscheinlich nutzen Sie WAMPServer, XAMPP oder eine ähnliche Umgebung, die nach Januar 2011 veröffentlicht wurde. Sie haben die folgenden Möglichkeiten:

- 1. Bearbeiten Sie Ihre php.ini-Datei und ändern die folgenden Zeilen:
- 2. error_reporting=E_ERROR
- display_errors=0

und starten Ihren Server neu. Bitte beachten Sie, dass einige Joomla!-Erweiterungen dennoch nicht funktionieren werden.

3. Installieren Sie Zend Server CE mit PHP5.2, XAMPP 1.6.4 oder eine andere Server-Umgebung PHP 5.2 (dringend empfohlen)

Sollten Sie diese Warnung ignorieren, sind Sie auf sich allein gestellt. Fragen Sie nicht nach Unterstützung. Alle Wiederherstellungsprobleme, die nach der Wiederherstellung auftreten, sind nicht von AkeebaBackup verschuldet. Sie wurden ausdrücklich gewarnt.

Datenbank anlegen

Da die default collation falsch ist, zuerst Datenbank anlegen und dann erst den User.

It's generally recommended to use "utf8_general_ci".

php.ini-Werte in der Htaccess setzen

Sollten Sie keinen Zugang zur php.ini haben, so lassen sich einige Einstellungen auch über eine Htaccess-Datei im Document-Root von Joomla! anpassen. Nachfolgend ein Beispiel, dass auf der offiziellen Dokumenation von PHP aufbaut:

Die nachfolgende Möglichkeit Werte für die php.ini in einer Htaccess-Datei zu setzten sind **extrem** abhängig von der jeweiligen individuellen Konfiguration der eingesetzten Serverumgebung Ihres Webhosters! - Halten Sie hier ggf. Rücksprache mit Ihrem Hoster, wie Sie php.ini-Variablen selbst anpassen können!

Muss man jedoch einen anderen Wert als "An" oder "Aus" setzen, wie z.B. einen Pfad, dann nutzt man:

php_value Name "Wert"

Beispiel: php_value open_basedir "/Absoluter Pfad zu Joomla!/htdocs/joomla/"

php_value upload_max_filesize "8M"
php_value post_max_size "8M"

```
# and the requested path and life doesn.t directly match a buy
 RewriteCond %{REQUEST FILENAME} !-d
 # internally rewrite the request to the index.php script
 RewriteRule .* index.php [L]
 #
 ## End - Joomla! core SEF Section.
 php_value upload_max_filesize "8M"

Upload hat funktioniert – ändere es aber doch auf 3M

Test mit 3M

Es kommt dann wieder die Meldung
